

Läreda Mekan - now called **VA Components**

In an effort to gather the entire VA Automotive Group under one brand and utilize the companies included in the group we now change the name Läreda Mekan to VA Components.

The name VA Components clarifies and connects Läreda Mekans product area closer together with VA Automotive. The new name will also be easier to communicate on the global market among our customers, suppliers and partners. With the new name VA Components we also announce a more aggressive marketing of our products and production resources.

The name change will not affect your contact channels, addresses or invoice details. We are only changing the company name.

VA Components

Box 34, 281 21 Hässleholm, Sweden

VA Automotive in brief

VA Automotive operates within three business areas; tooling technology, automation and components. The majority of its sales are attributable to the automotive industry.

VA Automotive's business structure was established in 2013, and led to the above-mentioned business areas. Taken together, the different areas constitute a unique set of competencies in great demand by the company's customers, but which is not currently offered by our competitors. This provides excellent conditions for future expansion and growth.

Products manufactured by the company include backrest frames, integrated child seats, air bag housings, pedal systems, moulded components and chassis components, etc. In addition, the company produces medium-sized and large tools and tooling equipment for the series production of high-quality components.

VA Automotive offers its customers total solutions, made possible by the collective competence and resources the company enjoys within the group as a whole. Because it operates in such areas as tooling technology, automation and vehicle components, group-wide resources in the form of personnel and equipment can be put to use flexibly within the company's internal organization. This also allows the achievement of maximum cost advantages. Limiting its customers' costs is of the utmost importance to VA Automotive.

The company's customers include Volvo, Autoliv, IAC, Scania, Lear Corporation, National Electric Vehicle Sweden, Johnson Controls, BMW, Volkswagen, GM, Ford, Daimler, Gnotec, Porsche, Jaguar, Opel, Mazda, Electrolux and Ikea.

VA Automotive is listed on the Nasdaq First North with Avanza Bank as its Certified Adviser.
